

Speaksee Translation Kit

Speaksee bridges language barriers by translating the conversation immediately to your language. Configure each individual microphone to pick up one language and translate into another.

SPEAKER RECOGNITION

Speaksee can recognize who is talking. Each person is shown in a different colour on the device. This makes it easy to see who says what in a group conversation.

REAL-TIME TRANSLATION

The speech is translated immediately in any of the 40+ available languages.

SECURITY

We use hardware and software encryption because we care about the security and privacy of our users.
